

FURNITURE HAVING LANDSCAPE CONTOUR

Abstract of the Disclosure

5 The invention relates generally to an article of manufacture such as a chair or
other furniture piece, and an associated method of manufacturing the article, wherein the
furniture piece contains a contour which is derived from a particular scenic silhouette.
The landscape contour may be, for example, the ridgeline which is formed by a particular
mountain when the mountain is viewed in profile. Thus, a particular mountain may have
more than one characteristic ridgeline or profile, depending upon the aspect from which
the mountain is viewed. A method of accurately transposing the profile from the natural
10 phenomenon to the furniture piece is also disclosed.
